DISTILLING MALTS

HEAVILY PEATED MALT

The most intense smoky character of our peated range, our Heavily Peated Malt is used to create some of the most smoke-rich whiskies in the world. At the end of the germination process, the malt is then partially kilned and then we introduce the peat smoke for 65-70 hrs. This is the point at which our Peated Malt really takes on a unique character; and what sets us apart from others trying to match the traditional process that we have perfected over decades.
