FLAVOR PROJECT

# Strata

**Strata<sup>®</sup> is the chart-topping hop variety launched by the Indie Hops Flavor Project in 2018.**

This hop has risen to prominence because of its depth of character that tantalizes hoppy beer lovers. Named for the many layers of flavor that this hop imparts in beer, Strata can fill out a double IPA all by itself, yet is smooth and elegant enough to contribute delicate versions of its catchy flavors in lower-gravity beer.

Passionfruit, strawberry, grapefruit and rock concert cannabis are primary descriptors of Strata. Bright and assertive, yet uniquely smooth and accessible to a wide range of palates, Strata connects with a broad set of craft beer consumers. Familiar yet modern, Strata's unique flavors have steadily been finding a way into already successful, well-known core IPAs to help modernize and improve the beer. And new Strata-driven recipes are already making their mark in the craft beer scene.

**We're excited to expand options for brewers by also offering Strata in cryogenic lupulin pellet form from the 2022 crop.**

Our neighbors Crosby Hops have developed a patent-pending cryogenic processing technology called CGX™. These pellets carry roughly twice the brewing values of T90 pellets, and can be very useful, especially in aggressively hopped beers. For high fidelity flavor, use a foundation of T90 pellets, then augment with CGX to improve efficiency and boost intensity.

### Chemistry T90s

---

→ Alpha Acid – 12% - 15%

---

→ Beta Acid – 5% - 6%

---

→ Total Oil – 2.3 - 3.5 ml / 100 g

---

### Chemistry CGX

---

→ Alpha Acid – 23.1%

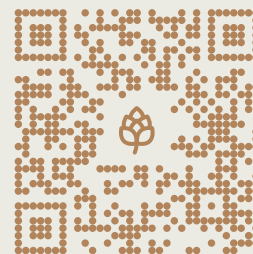

---

→ Beta Acid – 9.3%

---

→ Total Oil – 3.1 ml / 100 g

---

**Available through Loughran Brewer's Select in the UK.**
